Full-curl TDGL: full I–V and the local voltage drop
$T_0 = 0.18$ · final 48–50kτ of independently prepared 50kτ trajectories
A. Full current range
B. Zoom: local decrease
101 currents · one seed
Local drop
see panel B
Individual seeds
8-seed mean ± nominal 95% CI
14.32% paired decrease
All 8 seeds decrease
Voltage, V (model units)
Applied current parameter, $J_e$ (model units)
Lines guide comparisons between prepared points. A continuous stationary NDR branch remains unconfirmed.
