Full-curl gamma microtuning · fresh eight-seed validation v2
50kτ · final 48–50kτ · independent prepared points; stationary branch unconfirmed
Prepared endpoints · mean ± nominal 95% CI
V (model units)
Je (model units)
γ=40
γ=38
γ=42
Eight fresh seeds per gamma
Paired voltage decrease (%)
Gamma
Paired comparisons · one-sided α=0.025 bounds
Improvement over γ40 (percentage points)
Gamma
Endpoint drift · nominal 95% CI
Late-window voltage drift
γ40 low J
γ40 high J
γ38 low J
γ38 high J
γ42 low J
γ42 high J
